Education

BE-Computer Engineering, CGPA: 8.78

Ahmedabad, Gujarat

Vishwakarma Government Engineering College, Gujarat Technological University

Skills

Languages

Java, Golang,
JavaScript

Backend

Spring Boot, Gin, REST
APIs, Microservices

Databases

MySQL, Redis

Tools & Devops

Docker, Kubernetes,
Git

Core Concepts

Data Structures &
Algorithms,
Concurrency,
Distributed Systems

Professional Summary

Backend developer focused on building scalable systems using Java (Spring Boot) and Golang (Gin). Built distributed backend systems including a custom SMTP server, encrypted P2P messaging application, and distributed job queue. Solved 950+ algorithmic problems across LeetCode and CodeChef with strong expertise in data structures, concurrency, and system design fundamentals.

Projects

Offline Peer-to-Peer Encrypted Messaging System

Engineered a decentralized

- Architected a decentralized, LAN-based real-time chat application using TCP/UDP socket programming to eliminate reliance on central servers.
- Hardened messaging security by implementing end-to-end encryption protocols, including **AES-256** for data and **RSA** for secure key exchange.
- Optimized local network connectivity by developing an automatic peer-discovery mechanism via UDP broadcasting.
- Managed simultaneous user communication through a custom-built multi-threaded handler.

Custom Email Server & Client

- Engineered a custom SMTP-style mail server from scratch, supporting standard **SMTP** commands like **HELO**, **MAIL FROM** and **RCPT TO**.
- Streamlined concurrent user handling by implementing a multi-threaded architecture with efficient **Thread Pools**.
- Integrated a persistent local mailbox system using MySQL for synchronized inbox/outbox management.

Distributed Task Queue & Job Scheduler

- Built a high-performance distributed task-queue system in Go to execute background jobs across multiple worker nodes.
- Developed robust REST APIs using the Gin framework for real-time job submission and worker health monitoring.
- Leveraged Go's concurrency primitives (**Goroutines and Channels**) alongside Redis to manage high-concurrency task processing

Accomplishments

- Solved 950+ Data Structures & Algorithms problems 450+ on LeetCode
- 500+ on CodeChef
- Participated in 50+ LeetCode Weekly Contests
